

DB2000 SERIES DIGITAL INDICATING CONTROLLER

The DB2000 series is a 96×96mm digital indicating controller with the indicating accuracy of ±0.1% and the control cycle of approximately 0.1 seconds. The configuration of highly functional system is enabled by various options including 2 transmission signal outputs, 2 communications ports and arbitrarily-allocation of digital inputs.

■ FEATURES

● Large easy-to-view 5-digit display

Process value (PV) and set value (SV) are displayed by large easy-to-view 5-digit display indicators. The resolution of 0.1°C is enabled for more than 1000°C.

● Highly-functional operation screen and settings screen

The controller inherits the operation screen and the settings screen adopting the LCD (liquid-crystal-display) which has been familiarized for long time. Furthermore, the screens have become high-definition and highly sophisticated.

● Outstanding controllability

Two types of PID algorithms, the position-type PID algorithm and the speed-type PID algorithm, have been installed. You can select the optimum PID algorithm for an object controlled.

● Versatile control functions provided

Versatile control functions, such as the automatic PID system, which executes control by PID parameters preset at every SV sections, and selection of the 2-output control system from PID system and split system for 2-output types, are available.

● Communications 2-port type provided

Models with 2 communications ports are available. In addition, speeding up and highly-functionalization of communications have been realized. For example, you can use 1 port for high order communications with a personal computer and another port for the communications remote (digital remote) function. The communications protocol can be arbitrarily selected from [MODBUS] and [PRIVATE].

● Transmission signal 2-output type available

2 types of transmission signal output, the high-precision type (0.1% of full scale) and the general type (0.3% of full scale), are available. Transmission signal 2-output types with these 2 transmission signal outputs and models with transmitter power supply are available.

● READY function provided

Although the DB2000 series is the constant value controller, switching to the state (READY) that any control is not wanted is enabled.

In addition, the output value (MV) at READY can be set arbitrarily.

● DI arbitrarily-allocation

When the digital input (DI) is added, arbitrarily-allocation for assigning functions to those DI's is enabled. It is the function enabling allocations such as [READY/RUN] to DI1 and [Manual output operation/Automatic output operation] to DI2.

● Heater disconnection alarm

The heater disconnection alarm can be added to ON-OFF pulse types or SSR drive pulse types only.

By connecting the designated CT externally, the current value of heater is measured and can be indicated on the operation screen.

● Other functions

Various functions including multiple auto-tuning, timer function using the digital input (DI), control loop abnormality alarm and user calibration are built-in.

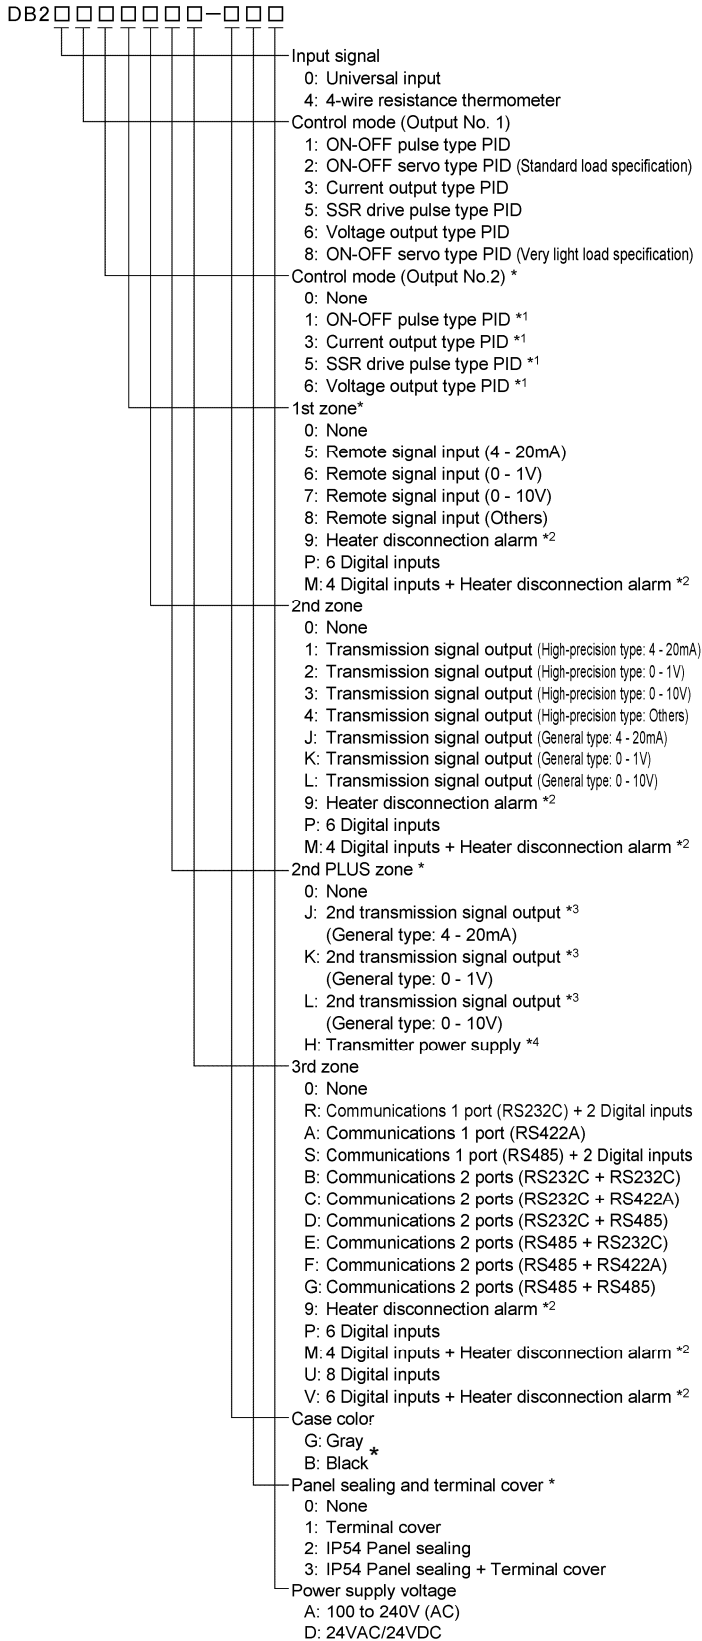

● Conforming to international safety standards and European directives (CE)

The controller is in conformity with European directives (CE), and is UL and c-UL approved.

● Conforming to RoHS

The controller is an environmental consideration product which does not contain directed hazardous substances such as lead, etc.

MODELS

* Option

*1 The control mode (Output No.1) can be selected from 1,3,5 or 6 only.

*2 Only available to the unit having output No.1 (or No.2) of 1 or 5.

Multiple selection in different option zone is not available.
 In case of pulse type in both Output No.1 and No.2, output No.1 makes alarm judgement.

*3 It can be selected when the 2nd zone is 1, 2, 3 or 4 only.

*4 It can be selected when the 2nd zone is 0, 1, 2, 3, 4, J, K or L only.

Note: For options common to 1st zone, 2nd zone and 3rd zone, assign them in the order of [9], [P] and [M] from 3rd zone first.

■ OPTIONS

●Transmission signal output

Output a signal corresponding to set value (SV), process value (PV), manipulated value (MV), etc.

Number of output: 1 point
 Output signal: 4 - 20mA (Load resistance 400Ω or less)
 0 - 1V (Output resistance Approx.10Ω, Load resistance 50kΩ or more)
 0 - 10V (Output resistance Approx.10Ω, Load resistance 50kΩ or more)

Output accuracy: High-precision type ±0.1% of full scale
 General type ±0.3% of full scale

●Transmitter power supply

Power voltage: 24VDC ± 10%
 Maximum current capacity: 30mA

●Remote signal input

By using external contacts, switching of remote mode and local mode is enabled. With the remote mode, the setting of SV is enabled by remote signal.

Number of inputs: 1 point
 Input signal: 4 - 20mA (Input impedance Approx.50Ω)
 0 - 1V (Input impedance Approx. 500kΩ)
 0 -10V (Input impedance Approx.100kΩ)

Input accuracy: ±0.1% ± 1digit
 Remote signal input: R/L (Remote/Local)

●Communications interface

With RS232C, RS422A or RS485, the setting and measured values of the controller can be transmitted to a master CPU and various parameters can be set by the master CPU.

Number of communications points: 1 point

Communications type: RS232C, RS422A, RS485
 Communications speed: 2400/4800/9600/19200/38400 bps
 Protocol: MODBUS (RTU), MODBUS (ASCII), PRIVATE

●Heater disconnection alarm

It is the function for detecting heater disconnection by CT input.

Measurement range: 10 to100A AC (50/60Hz)
 Accuracy rating: ±5.0% of full scale ± 1 digit
 Designed CT: Use [CTL-12-S36-8] made by URD Co., Ltd.

●2-output type

2 kinds of output with direct and reverse actions are outputted and simultaneous control of heating/cooling is enabled.

Control cycle: Approx. 0.1 seconds
 Output type: ON-OFF pulse type, Current output type, Voltage output type, SSR drive pulse type
 Any combinations of these types are enabled.
 Control system: PID system

●Digital input (DI)

The following switching is enabled by digital input signal.

Input signal: No-voltage contact, open-collector signal
 External contact capacity:

5VDC 2mA
 Functions:
 1. Selection of executing No. (4 points)
 2. Manual output operation/automatic output operation (2 points)
 3. READY/RUN switching
 4. Holding of PV
 5. Holding of SV slope operation
 6. Resetting of SV slope operation
 7. Start/reset of timer (4 points)
 8. Alarm output cancellation
 9. Preset manual/Automatic output operation

●Panel sealing

By mounting the controller to a panel, it has the panel sealing equivalent to [IP54 compliance].

●Terminal cover

It covers the terminals for safe. The cover is transparent.
