

KP1000 SERIES DIGITAL PROGRAM CONTROLLER

The KP1000 series is a 96x96mm digital program controller with the indicating accuracy of $\pm 0.1\%$, the control cycle of approximately 0.1 seconds and maximum 19 program patterns (maximum 19 steps/pattern).

Various functions including the whole program pattern display screen and universal input are provided as standard.

■ FEATURES

● Large easy-to-view 5-digit display

Large easy-to-view 5-digit display

Process value (PV) and set value (SV) are displayed by large easy-to-view 5-digit display indicators. The resolution of 0.1°C is enabled for more than 1000°C .

● Outstanding controllability

Two types of PID algorithms, the position-type PID algorithm and the speed-type PID algorithm, have been installed. You can select the optimum PID algorithm for an object controlled.

● Operability inheriting previous models

The controller inherits the settings screen which has been familiarized for long time. You can set up it with operation which is not different from previous models. The performance of touching-keys has been improved and the outstanding operability has been realized.

● High-precision transmission signal output

The high-precision (0.1% of full scale) analog transmission signal output can be added.

● 24V power supply voltage type provided

The power supply voltage 24V (AC/DC) type, which is advantageous in respect of safe, is available.

● Program pattern

Settings of maximum 19 steps per pattern and maximum 19 sets of patterns are enabled. Repeating of a whole program pattern, linking of program patterns and repeating of a specific step in a program pattern are enabled, too.

● Easily identifiable pattern progress display

By selecting the whole program pattern display screen in the operation screen, the shape of whole program pattern and the progressed pattern position are identifiable at a glance.

● Universal input

Various measurement ranges of DC voltage (up to maximum 10V) inputs, DC current input, thermocouple inputs and resistance thermometer inputs have been built-in.

● 2 colors of casing available

You can select the color of casing from 2 colors of gray with OA equipment feeling and black with high-class feeling.

● Conforming to international safety standards and European directives (CE)

The controller is in conformity with European directives (CE), and is UL and c-UL approved.

● Conforming to RoHS

The controller is an environmental consideration product which does not contain directed hazardous substances such as lead, etc.

Display

1. Operation status (RUN) indication
Lights in operation.
2. Operation stop (STOP) indication
Lights in the state of operation stop.
3. RESET indication
Lights when operation is cancelled and returns to the start point.
4. Constant value operation (CONST) indication
Light in constant value operation.
5. Pattern No. (PTN) indication
6. Alarm-standby (WAIT) indication
Lights in alarm-standby status or when alarm is cancelled.
Blinks when standby time alarm is activated.
7. Program remote (REM) indication
Lights when operation is executed by external drive input.
8. Executing step number (STP) indication
The step No. being executed is indicated.
(Blinks in real temperature compensation operation.)
9. Error (ERR) indication
Lights when sampling of input is abnormal.
10. Auto-tuning operation (AT) indication
Lights in auto-tuning operation.
11. Manual operation (MAN1/MAN2) indication
Lights when the output No. 1 or No. 2 is in manual output operation.
12. Function (FNC) operation indication
Lights when the function key is operated.
20. Process value (PV) indication
21. Set value (SV) indication
22. Time signal (TS1 to TS5) indication

Function keys

13. FNC key
With the operation screen displayed, pressing it puts the controller in the operation key mode. With the settings screen displayed, pressing it puts the controller in the setting key mode and it operates to move the cursor backwards.
14. RUN key
In the operation key mode, it operates as RUN key. With the settings screen displayed, pressing it puts the controller in the setting key mode and it is used for switching between the operation screen and the mode screen of Mode 0, or for switching from the settings screen to the mode screen.
15. STOP key
In the operation key mode, it operates as STOP key. With the settings screen displayed, pressing it puts the controller in the setting key mode and it is used to switch the settings screen.
16. ADV (Advance) key
In the operation key mode, it operates as ADV key. With the settings screen displayed, pressing it puts the controller in the setting key mode and it is used for moving the cursor and for selecting a parameter.
17. RESET key
In the operation key mode, it operates as RESET key. With the settings screen displayed, pressing it puts the controller in the setting key mode and it is used for changing a setting value (or selecting a parameter) in descending order.
18. PTN (Pattern) key
In the operation key mode, it operates as PTN key. With the settings screen displayed, pressing it puts the controller in the setting key mode and it is used for changing a setting value (or selecting a parameter) in ascending order.
19. A/M (Auto/Manual) key
In the operation key mode, it operates as A/M key. With the settings screen displayed, pressing it puts the controller in the setting key mode and it is used for registering the settings.

Lower display

23. A wide variety of operation screens are prepared and arbitrarily-selection is enabled.
On the whole program pattern display screen, the simultaneous display of the shape of whole program pattern and the progressed pattern position has been realized.

■ OPTIONS

●Transmission signal output

Output a signal corresponding to set value (SV), process value (PV), manipulated value (MV), etc.

Number of output: 1 point
 Output signal: 4 - 20mA (Load resistance 400Ω or less)
 0 - 1V
 (Output resistance Approx.10Ω, Load resistance 50kΩ or more)
 0 - 10V
 (Output resistance Approx.10Ω, Load resistance 50kΩ or more)
 Output accuracy: $\pm 0.1\%$ of full scale
 Output resolution: Approximately 1/30000

●Communications interface

With RS232C, RS422A or RS485, the setting and measured values of the controller can be transmitted to a master CPU and various parameters can be set by the master CPU.

Number of communications points: 1 point
 Communications type: RS232C, RS422A, RS485
 Communication speed: 2400/4800/9600/19200/38400 bps
 Protocol: MODBUS (RTU), MODBUS (ASCII), PRIVATE

●Panel sealing

By mounting the controller to a panel, it has the panel sealing equivalent to [IP54 compliance].

●Terminal cover

It covers the terminals for safe. The cover is transparent.

●2-output type

2 kinds of output with direct and reverse actions are outputted and simultaneous control of heating/cooling is enabled.

Control period: Approx. 0.1 seconds
 Output type: ON-OFF pulse type, Current output type, Voltage output type, SSR drive pulse type
 Any combinations of these types are enabled.
 Control system: PID system

●External drive input

Operation by external contact signal input is enabled.

Input signal: No-voltage contact, open-collector signal

Functions: 1. Run/Stop
 2. Advance
 3. Reset
 4. Wait * Not available for 3 external drive inputs

●Pattern Selecting input

Selection of pattern No. by external contact signal input is enabled.

Input signal: No-voltage contact, open-collector signal

Function: Pattern No. selection 5 points

●Status signal output

Current operation status can be outputted.

Output signal: Open-collector signal

Functions: 1. Run/stop
 2. Advance
 3. Reset
 4. Wait

●Time signal output

Time signal can be outputted for each preset pattern/step.

Output signal: Open-collector signal

Function: Time signal 5 points
 * 4 points in case of time signal 4 points specification

●End signal output

Program operation end status can be outputted.

Output signal: Open-collector signal

Function: End
